S-200 is on the U.S. Environmental Protection Agency's NCP Product Schedule. This listing does NOT mean that EPA approves, recommends, licenses, certifies, or authorizes the use of S-200 on an oil discharge. This listing means only that data have been submitted to EPA as required by subpart J of the National Contingency Plan, § 300.915. The data submitted exceeds the testing criteria for the bioremediation effectiveness test and therefore qualifies to be listed on the NCP product schedule.

### Directions for Use

CONTENTS: 1 QUART

Empty the contents of the bottle into the access points of the bilge. The normal rocking action of the boat in the water will disperse the material throughout the bilge area. Boats larger than 28 feet in length generally require two quarts. Re-apply every two months while the boat is in the water. To maintain the bilge during winter storage, pour into the area before storage. Repeat the process during pre-season maintenance. Discharge bilge water in accordance with all federal, state and local laws and regulations. Please note that an excessively polluted bilge may require an additional application.
